PURPOSE:To obtain the title resin excellent in matte effect, processability, light resistance and heat stability, by mixing a polyester resin with the fine zinc sulfide particles and a phosphorus compound.
CONSTITUTION:A polyester resin (A) preferably having at least 75% ethylene terephthalate residues or butylene terephthalate residues is mixed with 1.0-40.0wt.% fine particles (B) of zinc sulfide and/or a substance containing at least 10wt.% zinc sulfide and having an average particle diameter $\leq 2.0\mu$ and a Moh's hardness of 3.5-4, a phosphorus compound (C) containing 0.001-0.05mol. of P per mol of Zn of component B and, optionally, a cobalt compound (D) (e.g., cobalt acetate) in an amount to give 0.005-0.01mol. of Co per mol of Zn of component B and to be at most 200ppm, based on the obtained resin.
